## Abstract

An abstract

## 1 Introduction

An introduction contains words.

Often it will have citations, as well [1; 2].

### 1.1 sub-section from a subfile

This is content from a subfile that is self contained. It inherits all packages from the “Master” file, but can be compiled on its own. This is especially nice when the document has lots of figures and you are only working on one section/subsection of the document.

You can compile this subfile by using `xelatex sub-file.tex`

The idea is that a person would copy and rename the file and include their content. When working on github with more than one author this can be very helpfull, each person gets their own subfile. [Info about the subfiles package can be found here](#)

Citations work the same, usign the master bib file: You need to remember to run bibtex on sub-file.aux. [3]

## 2 Methods

Often we do things, these things can be called methods<sup>1</sup>.

Tables 1 also get pretty frames.

**Woah** Paragraphs are bolded.

Table 1: see! I'm framed!.

<b>columns</b>	<b>are</b>	<b>often</b>	<b>bold</b>
and	contain	useful	data

**Another bold para** because I can. [3]

## 3 Results

We made science happen.

### 3.1 yes, we have subsections too

words can even go under them.

## 4 Discussion

The world is better because YOU are in it [4].

## **Appendix A   thought you were done?**

ya.... appendices are also a thing.

### **A.1   with sub sections**

yup.

#### **A.1.1   and sub sub sections**

sorry.
